

SQL PROJECT :

# Airline Reservation System

Name : Vikrant Jagannath Chavan

# INTRODUCTION

The Airline Reservation System is an SQL-based project designed to manage and streamline the process of booking and managing airline flights. This system focuses on storing, retrieving, and processing essential information related to passengers, flights, bookings, payments, schedules, and crew assignments. It simulates the core functionalities of a real-world airline database, ensuring efficient data management for both passengers and airlines.

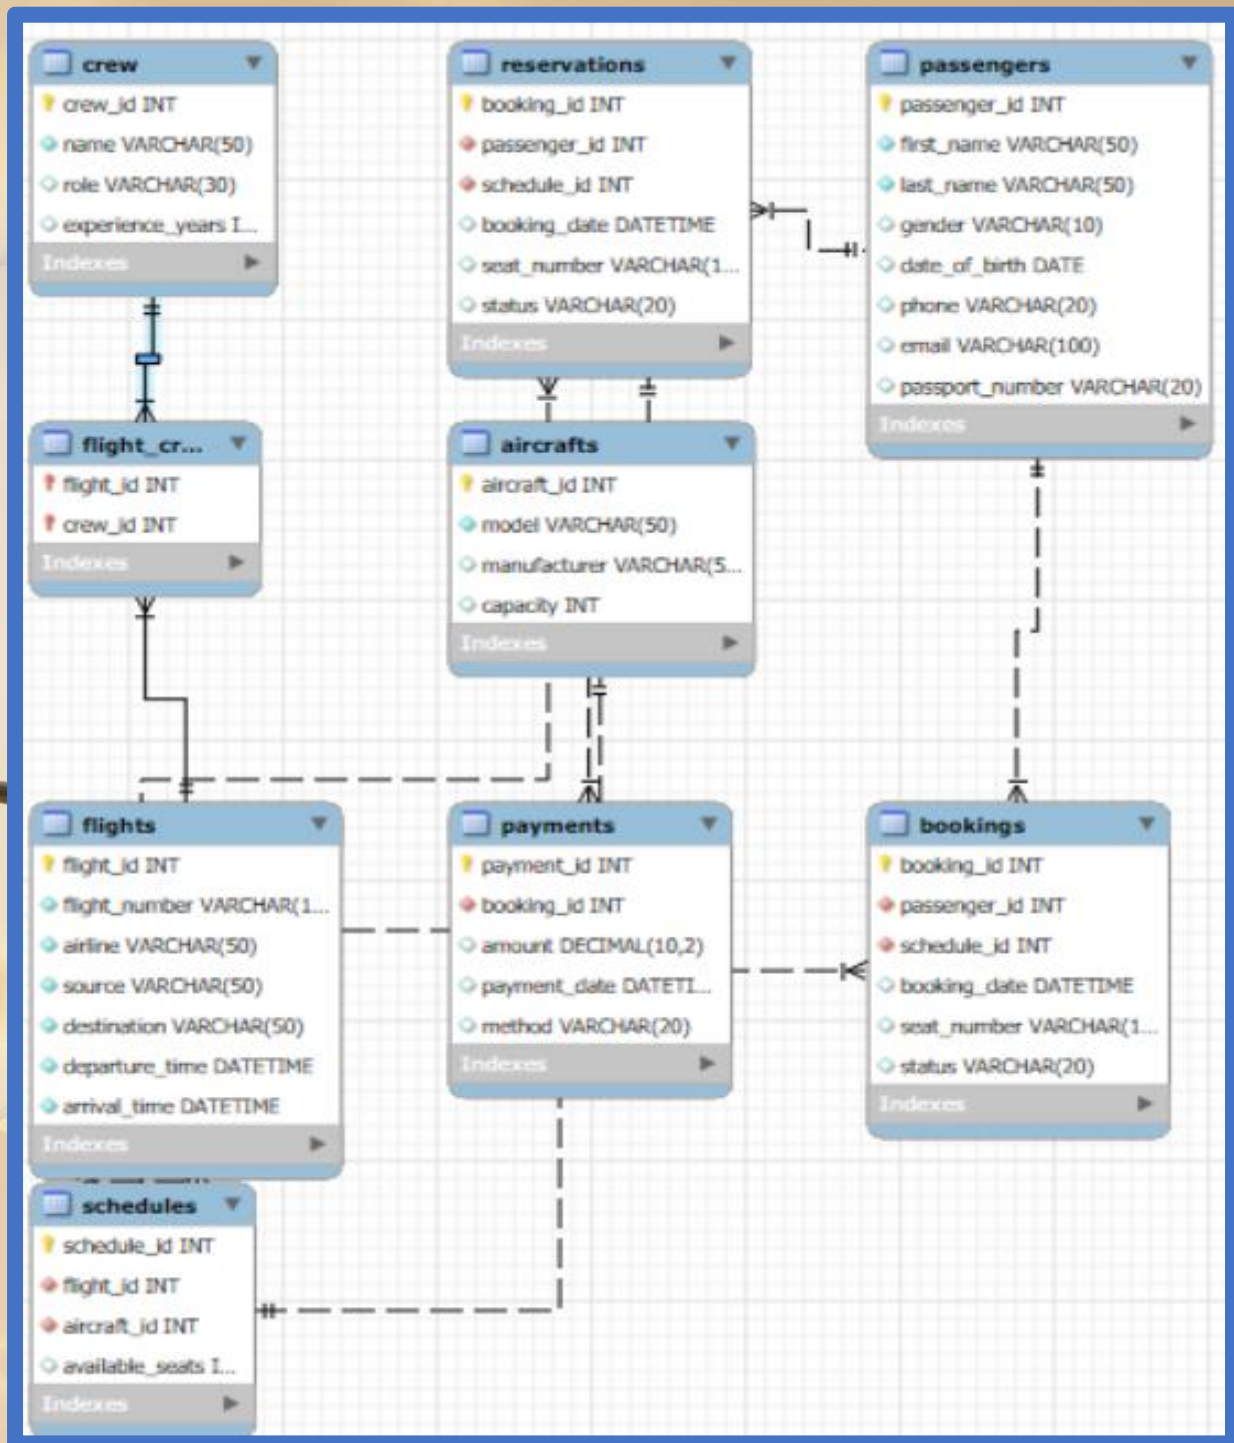

The primary goal of this system is to provide quick access to critical flight and passenger information, allowing airlines to manage reservations effectively and passengers to book tickets with ease. By maintaining well-structured records of flights, available seats, passenger details, and payment transactions, the system ensures reliability, accuracy, and convenience in the airline reservation process.

From a technical perspective, the project utilizes relational database concepts such as table creation, constraints, relationships, and normalization to organize data efficiently. It also employs SQL operations like insertion, updates, filtering, aggregation, joins, subqueries, and views to support powerful queries and analysis.

The project demonstrates how databases can be used in real-world scenarios to manage complex information systems. It can be extended further to include advanced features such as frequent flyer programs, ticket cancellations, real-time seat availability, and dynamic pricing.

By working on this project, one can strengthen their skills in SQL, database design, and data analysis while understanding how technology powers the aviation industry's core operations.

## ER Diagram

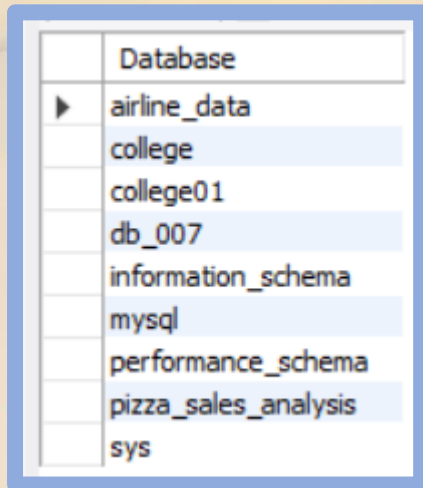

## Databases

`create database` Airline\_data;

`use` Airline\_data;

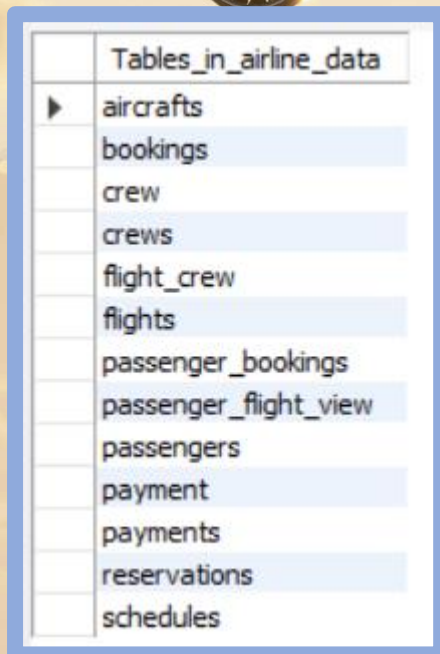

`show databases;`

# Data Definition Language(DDL)

## 1.Creating Tables

### A.Passengers

Stores passengers details.

Create Table Passengers (passenger\_id int primary key, first\_name varchar(50) not null, last\_name varchar(50) not null, gender varchar(10), dob date, phone varchar(15) unique, email varchar(100) unique);

Desc Passengers;

|   | Field        | Type         | Null | Key | Default | Extra |
|---|--------------|--------------|------|-----|---------|-------|
| ► | passenger_id | int          | NO   | PRI | NULL    |       |
|   | first_name   | varchar(50)  | NO   |     | NULL    |       |
|   | last_name    | varchar(50)  | NO   |     | NULL    |       |
|   | gender       | varchar(10)  | YES  |     | NULL    |       |
|   | dob          | date         | YES  |     | NULL    |       |
|   | phone        | varchar(15)  | YES  | UNI | NULL    |       |
|   | email        | varchar(100) | YES  | UNI | NULL    |       |

### B.Flights

Stores flight details.

Create Table Flights ( flight\_id int primary key, flight\_number varchar(10) unique not null, airline varchar(50) not null, source varchar(50) not null, destination varchar(50) not null, departure\_time datetime not null, arrival\_time datetime not null, duration int check (duration > 0));

Desc Flights;

|   | Field          | Type        | Null | Key | Default | Extra |
|---|----------------|-------------|------|-----|---------|-------|
| ► | flight_id      | int         | NO   | PRI | NULL    |       |
|   | flight_number  | varchar(10) | NO   | UNI | NULL    |       |
|   | airline        | varchar(50) | NO   |     | NULL    |       |
|   | source         | varchar(50) | NO   |     | NULL    |       |
|   | destination    | varchar(50) | NO   |     | NULL    |       |
|   | departure_time | datetime    | NO   |     | NULL    |       |
|   | arrival_time   | datetime    | NO   |     | NULL    |       |
|   | duration       | int         | YES  |     | NULL    |       |

### C.Aircrafts

Stores details of airplane used.

**Create Table** Aircrafts ( aircraft\_id int primary key, model varchar(50) not null, manufacturer varchar(50), capacity int check (capacity > 0));

**Desc** Aircrafts;

|   | Field        | Type        | Null | Key | Default | Extra |
|---|--------------|-------------|------|-----|---------|-------|
| ▶ | aircraft_id  | int         | NO   | PRI | NULL    |       |
|   | model        | varchar(50) | NO   |     | NULL    |       |
|   | manufacturer | varchar(50) | YES  |     | NULL    |       |
|   | capacity     | int         | YES  |     | NULL    |       |

### D.Schedules

Links flights with aircrafts(flight schedule).

**Create Table** Schedules ( schedule\_id int primary key, flight\_id int not null, aircraft\_id int not null, available\_seats int check(available\_seats >= 0), foreign key(flight\_id) references Flights(flight\_id), foreign key(aircraft\_id) references Aircrafts(aircraft\_id));

**Desc** Schedules;

|   | Field           | Type | Null | Key | Default | Extra |
|---|-----------------|------|------|-----|---------|-------|
| ▶ | schedule_id     | int  | NO   | PRI | NULL    |       |
|   | flight_id       | int  | int  | MUL | NULL    |       |
|   | aircraft_id     | int  | NO   | MUL | NULL    |       |
|   | available_seats | int  | YES  |     | NULL    |       |

### E.Bookings

Stores passengers booking information.

**Create Table** Bookings(booking\_id int primary key, passenger\_id int not null, schedule\_id int not null, booking\_date datetime default current\_timestamp, seat\_number varchar(10), status varchar(20) check(status in ('confirmed','cancelled','pending')), foreign key(passenger\_id) references Passengers(passenger\_id), foreign key (schedule\_id) references Schedules(schedule\_id));

**Desc** Bookings;

|   | Field        | Type        | Null | Key | Default           | Extra             |
|---|--------------|-------------|------|-----|-------------------|-------------------|
| ► | booking_id   | int         | NO   | PRI | NULL              |                   |
|   | passenger_id | int         | NO   | MUL | NULL              |                   |
|   | schedule_id  | int         | NO   | MUL | NULL              |                   |
|   | booking_date | datetime    | YES  |     | CURRENT_TIMESTAMP | DEFAULT_GENERATED |
|   | seat_number  | varchar(10) | YES  |     | NULL              |                   |
|   | status       | varchar(20) | YES  |     | NULL              |                   |

## F.Payment

Stores payments details for bookings.

Create Table Payment (payment\_id int primary key, booking\_id int not null, amount decimal(10,2) check(amount > 0), payment\_date datetime default current\_timestamp, method varchar(20) check(method in ('Credit Card','Debit Card','UPI','Net Banking','Cash')), foreign key (booking\_id) references Bookings(booking\_id));

Desc Payment;

|   | Field      | Type          | Null | Key | Default           | Extra             |
|---|------------|---------------|------|-----|-------------------|-------------------|
| ► | payment_id | int           | NO   | PRI | NULL              |                   |
|   | booking_id | int           | NO   | MUL | NULL              |                   |
|   | amount     | decimal(10,2) | YES  |     | NULL              |                   |
|   | payment_d  | amount time   | YES  |     | CURRENT_TIMESTAMP | DEFAULT_GENERATED |
|   | method     | varchar(20)   | YES  |     | NULL              |                   |

## G.Crews

Stores flight crew details.

Create Table Crews (crew\_id int primary key, name varchar(50) not null, role varchar(30) check (role in ('Pilot','Co-Pilot','Cabin Crew','Engineer')), experience\_years int check (experience\_years >= 0));

Desc Crews

|   | Field            | Type        | Null | Key | Default | Extra |
|---|------------------|-------------|------|-----|---------|-------|
| ► | crew_id          | int         | NO   | PRI | NULL    |       |
|   | name             | varchar(50) | NO   |     | NULL    |       |
|   | role             | varchar(30) | YES  |     | NULL    |       |
|   | experience_years | int         | YES  |     | NULL    |       |

## H. Flight Crew

Mapping table for many-to-many relation between flights and crew.

Create Table Flight\_Crew (flight\_id int not null, crew\_id int not null, primary key (flight\_id, crew\_id), foreign key (flight\_id) references Flights(flight\_id), foreign key (crew\_id) references Crew(crew\_id));

Desc Flight\_Crew;

|   | Field     | Type | Null | Key | Default | Extra |
|---|-----------|------|------|-----|---------|-------|
| ► | flight_id | int  | NO   | PRI | NULL    |       |
|   | crew_id   | int  | NO   | PRI | NULL    |       |

## 2.Alter Tables

### A. Add New Column

Alter table Passengers add passport\_number varchar(20) unique;

|   | Field           | Type         | Null | Key | Default | Extra |
|---|-----------------|--------------|------|-----|---------|-------|
| ► | passenger_id    | int          | NO   | PRI | NULL    |       |
|   | first_name      | varchar(50)  | NO   |     | NULL    |       |
|   | last_name       | varchar(50)  | NO   |     | NULL    |       |
|   | gender          | varchar(10)  | YES  |     | NULL    |       |
|   | dob             | date         | YES  |     | NULL    |       |
|   | phone           | varchar(15)  | YES  | UNI | NULL    |       |
|   | email           | varchar(100) | YES  | UNI | NULL    |       |
|   | passport_number | varchar(20)  | YES  | UNI | NULL    |       |

### B. Modify Column

Alter table Passengers modify phone varchar(20);

|   | Field           | Type         | Null | Key | Default | Extra |
|---|-----------------|--------------|------|-----|---------|-------|
| ► | passenger_id    | int          | NO   | PRI | NULL    |       |
|   | first_name      | varchar(50)  | NO   |     | NULL    |       |
|   | last_name       | varchar(50)  | NO   |     | NULL    |       |
|   | gender          | varchar(10)  | YES  |     | NULL    |       |
|   | dob             | date         | YES  |     | NULL    |       |
|   | phone           | varchar(20)  | YES  | UNI | NULL    |       |
|   | email           | varchar(100) | YES  | UNI | NULL    |       |
|   | passport_number | varchar(20)  | YES  | UNI | NULL    |       |

### C. Rename Column

**Alter table** Passengers **change** dob **date\_of\_birth** **date**;

|   | Field           | Type         | Null | Key | Default | Extra |
|---|-----------------|--------------|------|-----|---------|-------|
| ▶ | passenger_id    | int          | NO   | PRI | NULL    |       |
|   | first_name      | varchar(50)  | NO   |     | NULL    |       |
|   | last_name       | varchar(50)  | NO   |     | NULL    |       |
|   | gender          | varchar(10)  | YES  |     | NULL    |       |
|   | date_of_birth   | date         | YES  |     | NULL    |       |
|   | phone           | varchar(20)  | YES  | UNI | NULL    |       |
|   | email           | varchar(100) | YES  | UNI | NULL    |       |
|   | passport_number | varchar(20)  | YES  | UNI | NULL    |       |

### D. Drop Column

**Alter table** Flights **drop** duration;

|   | Field          | Type        | Null | Key | Default | Extra |
|---|----------------|-------------|------|-----|---------|-------|
| ▶ | flight_id      | int         | NO   | PRI | NULL    |       |
|   | flight_number  | varchar(10) | NO   | UNI | NULL    |       |
|   | airline        | varchar(50) | NO   |     | NULL    |       |
|   | source         | varchar(50) | NO   |     | NULL    |       |
|   | destination    | varchar(50) | NO   |     | NULL    |       |
|   | departure_time | datetime    | NO   |     | NULL    |       |
|   | arrival_time   | datetime    | NO   |     | NULL    |       |

### E. Rename table

**Alter table** Bookings **rename** Reservations;

|   | Tables_in_airline_data |
|---|------------------------|
| ▶ | aircrafts              |
|   | crew                   |
|   | flight_crew            |
|   | flights                |
|   | passengers             |
|   | payments               |
|   | reservations           |
|   | schedules              |

### 3. Truncate Table

Truncate table payment;

|   | payment_id | booking_id | amount | payment_date | method |
|---|------------|------------|--------|--------------|--------|
| * | NULL       | NULL       | NULL   | NULL         | NULL   |

### 4. Drop Table

Drop table payment;

## 1. Insert into Table

```
Insert into Passengers(passenger_id,first_name, last_name, gender,
date_of_birth, phone, email) values (1001,'Rahul', 'Sharma', 'Male', '1995-05-
20', 9876543210, 'rahul@example.com');
```

```
select * from passengers;
```

[illegible]

## 2. Update into Table

Q. Update passengers phone number.

Update Passengers set phone = 9998887770 where passenger\_id = 1001;

[illegible]

### 3.Delete From Table

### Q. Delete passenger record.

```
Delete from Passengers where passenger_id = 1006;
```

[illegible]

# Data Query Language (DQL)

## 1. Select

Q. Display all flights between Delhi and Mumbai

Select flight\_number, airline, departure\_time, arrival\_time from Flights where source = 'Delhi' and destination = 'Mumbai';

|   | flight_number | airline   | departure_time      | arrival_time        |
|---|---------------|-----------|---------------------|---------------------|
| ▶ | AI101         | Air India | 2025-09-25 08:00:00 | 2025-09-25 10:15:00 |

## 2. Order by

Q. Show all passengers sorted by last name in alphabetical order.

Select passenger\_id, first\_name, last\_name, email from Passengers order by last\_name asc;

|   | passenger_id | first_name | last_name | email             |
|---|--------------|------------|-----------|-------------------|
| ▶ | 1005         | Maya       | More      | maya@example.com  |
|   | 1002         | Priya      | Patel     | priya@example.com |
|   | 1003         | Riya       | Patil     | riya@gmail.com    |
|   | 1001         | Rahul      | Sharma    | rahul@example.com |
|   | 1004         | Rohit      | Verma     | rohit@example.com |
| * | NULL         | NULL       | NULL      | NULL              |

Q. List all flights sorted by departure time (earliest first).

Select flight\_number, airline, source, destination, departure\_time from Flights order by departure\_time asc;

|   | flight_number | airline   | source    | destination | departure_time      |
|---|---------------|-----------|-----------|-------------|---------------------|
| ▶ | AI101         | Air India | Delhi     | Mumbai      | 2025-09-25 08:00:00 |
|   | 6E505         | IndiGo    | Mumbai    | Bangalore   | 2025-09-26 15:00:00 |
|   | SG220         | SpiceJet  | Pune      | Delhi       | 2025-09-27 07:30:00 |
|   | AI202         | Air India | Delhi     | Chennai     | 2025-09-28 14:00:00 |
|   | UK150         | Vistara   | Bangalore | Kolkata     | 2025-09-29 11:00:00 |

## 3. Limit

Q. Top 5 most expensive bookings

Select booking\_id, passenger\_id, seat\_number from Bookings order by booking\_date desc limit 5;

|   | booking_id | passenger_id | seat_number |
|---|------------|--------------|-------------|
| ▶ | 38         | 1005         | 22F         |
|   | 37         | 1004         | 02D         |
|   | 36         | 1003         | 18C         |
|   | 35         | 1002         | 14B         |
|   | 34         | 1001         | 12A         |
| * | NULL       | NULL         | NULL        |

#### 4. Distinct

Q. Show all unique airlines operating flights.

Select distinct airline from Flights;

|   | airline   |
|---|-----------|
| ▶ | Air India |
|   | IndiGo    |
|   | SpiceJet  |
|   | Vistara   |

#### 5. Where Clause

##### A. With Comparison Operator

Q. Show all passengers born after the year 2000.

Select passenger\_id, first\_name, last\_name, date\_of\_birth from Passengers where date\_of\_birth > '1995-01-01';

|   | passenger_id | first_name | last_name | date_of_birth |
|---|--------------|------------|-----------|---------------|
| ▶ | 1001         | Rahul      | Sharma    | 1995-05-20    |
|   | 1002         | Priya      | Patel     | 1998-03-12    |
| * | NULL         | NULL       | NULL      | NULL          |

Q. Show bookings that are confirmed.

Select booking\_id, passenger\_id, status from Bookings where status = 'Confirmed';

|   | booking_id | passenger_id | status    |
|---|------------|--------------|-----------|
| ▶ | 34         | 1001         | Confirmed |
|   | 35         | 1002         | Confirmed |
|   | 38         | 1005         | Confirmed |
| • | NULL       | NULL         | NULL      |

## B. With Logical Operators

### - Using AND Operator

Q. Find all crew members who are Pilots with more than 10 years of experience.

Select crew\_id, name, role, experience\_years from Crews where role = 'Pilot' and experience\_years > 10;

|   | crew_id | name                | role  | experience_years |
|---|---------|---------------------|-------|------------------|
| ▶ | 1       | Captain Arjun Mehta | Pilot | 12               |
| • | NULL    | NULL                | NULL  | NULL             |

### - Using OR Operator

Q. List bookings that are either Cancelled or Pending.

Select booking\_id, passenger\_id, status from Bookings where status = 'Cancelled' OR status = 'Pending';

|   | booking_id | passenger_id | status    |
|---|------------|--------------|-----------|
| ▶ | 36         | 1003         | Pending   |
|   | 37         | 1004         | Cancelled |
| • | NULL       | NULL         | NULL      |

### - Using NOT Operator

Q. Show all bookings that are not confirmed.

Select booking\_id, passenger\_id, status from Bookings where not status = 'Confirmed';

|   | booking_id | passenger_id | status    |
|---|------------|--------------|-----------|
| ▶ | 36         | 1003         | Pending   |
|   | 37         | 1004         | Cancelled |
| • | NULL       | NULL         | NULL      |

### - Using NOT NULL Operator

Q. Show all passengers who have registered an email.

Select passenger\_id, first\_name, last\_name, email from Passengers where email is not null;

|   | passenger_id | first_name | last_name | email             |
|---|--------------|------------|-----------|-------------------|
| ▶ | 1005         | Maya       | More      | maya@example.com  |
|   | 1002         | Priya      | Patel     | priya@example.com |
|   | 1001         | Rahul      | Sharma    | rahul@example.com |
|   | 1003         | Riya       | Patil     | riya@gmail.com    |
|   | 1004         | Rohit      | Verma     | rohit@example.com |
| * | NULL         | NULL       | NULL      | NULL              |

### - Using BETWEEN Operator

Q. Find all payments made between ₹5000 and ₹10000.

Select payment\_id, booking\_id, amount from Payment where amount between 5000 AND 8000;

|   | payment_id | booking_id | amount  |
|---|------------|------------|---------|
| ▶ | 20         | 34         | 5500.00 |
|   | 21         | 35         | 5500.00 |
|   | 24         | 38         | 6100.00 |
| * | NULL       | NULL       | NULL    |

### - Using IN Operator

Q. Find flights that operate from Delhi, Mumbai, or Bangalore.

Select flight\_number, airline, source, destination from Flights where source in ('Delhi', 'Mumbai', 'Bangalore');

|   | flight_number | airline   | source    | destination |
|---|---------------|-----------|-----------|-------------|
| ▶ | AI101         | Air India | Delhi     | Mumbai      |
|   | 6E505         | IndiGo    | Mumbai    | Bangalore   |
|   | AI202         | Air India | Delhi     | Chennai     |
|   | UK150         | Vistara   | Bangalore | Kolkata     |

### - Using ANY Operator

Q. Show payments that are equal to any of 5000 or 8000.

Select payment\_id, amount, method from Payment where amount = any (select amount from Payment where amount in (5500, 8000));

|   | payment_id | amount  | method      |
|---|------------|---------|-------------|
| ▶ | 20         | 5500.00 | Credit Card |
|   | 21         | 5500.00 | UPI         |
| • | NULL       | NULL    | NULL        |

- Using ALL Operator

Q. Show payments that are less than all payments greater than 9000.

Select payment\_id, amount from Payment where amount < ALL (select amount from Payment where amount > 9000);

|   | payment_id | amount  |
|---|------------|---------|
| ▶ | 20         | 5500.00 |
|   | 21         | 5500.00 |
|   | 22         | 4200.00 |
|   | 23         | 8200.00 |
|   | 24         | 6100.00 |
| • | NULL       | NULL    |

## 6. Aggregate Functions

- Count Function

Q. Find the total number of passengers.

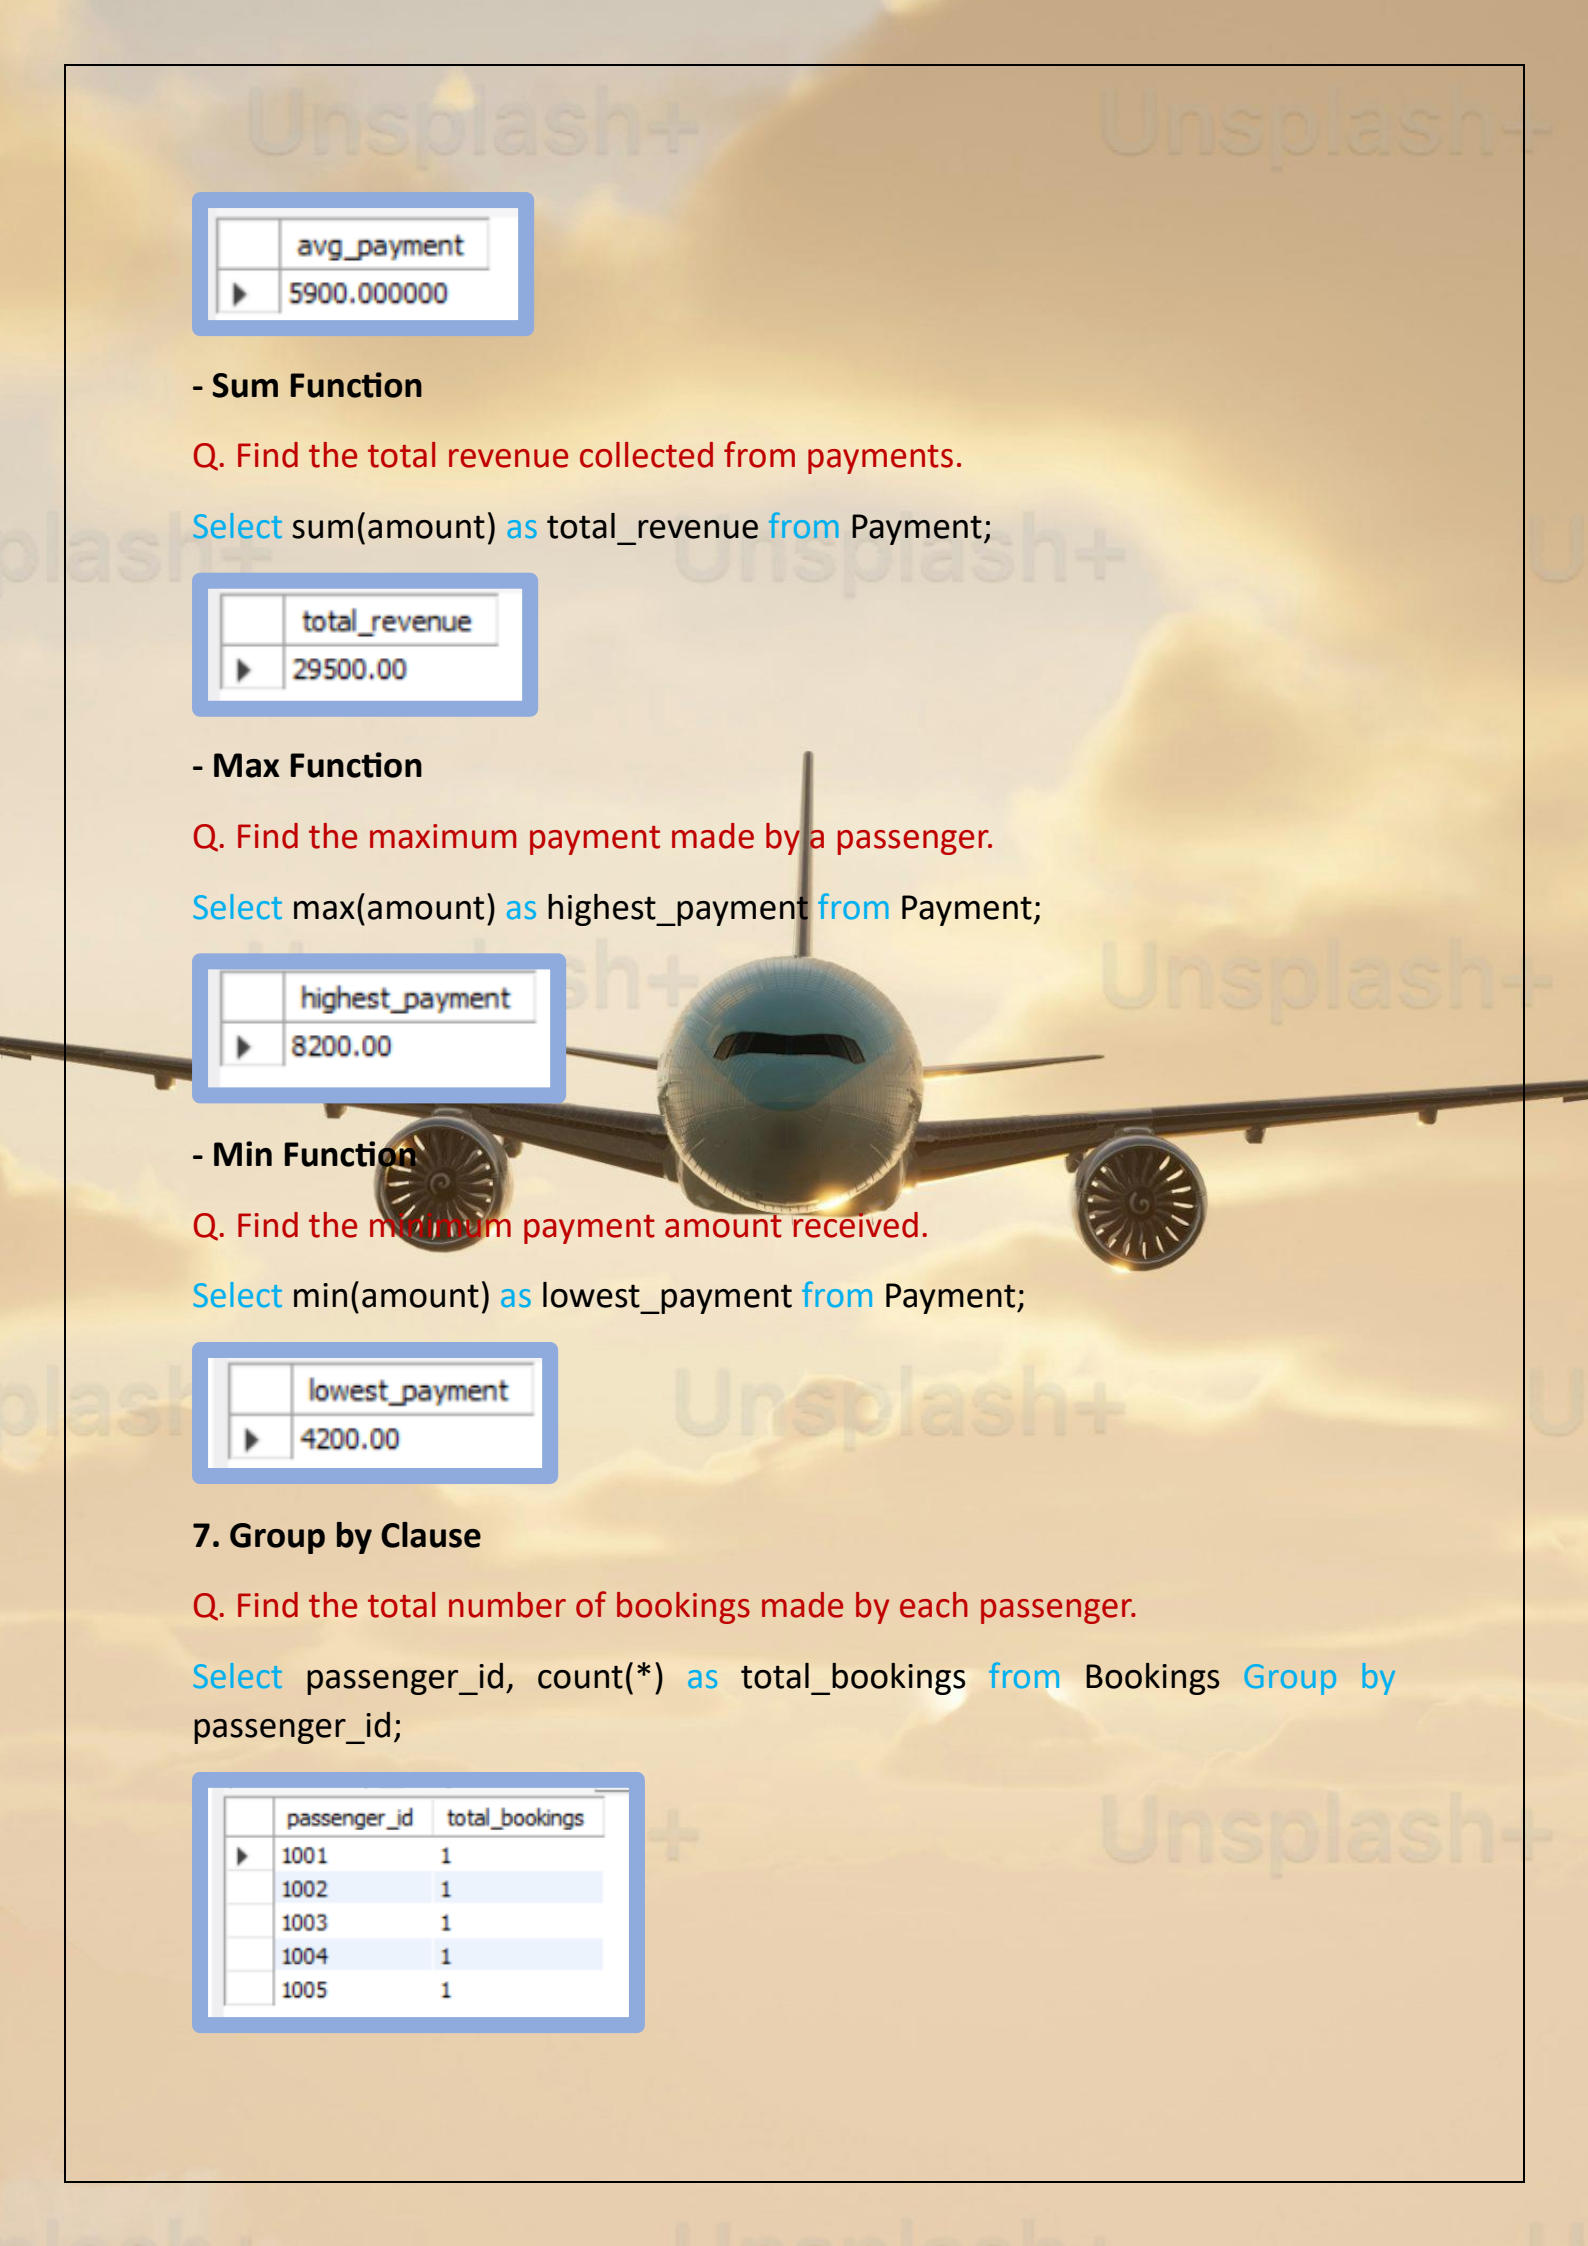

Select count(\*) as total\_passengers from Passengers;

|   | total_passengers |
|---|------------------|
| ▶ | 5                |

- Average Function

Q. Find the average payment amount made by passengers.

Select avg(amount) as avg\_payment from Payment;

|   |             |
|---|-------------|
|   | avg_payment |
| ▶ | 5900.000000 |

### - Sum Function

Q. Find the total revenue collected from payments.

Select sum(amount) as total\_revenue from Payment;

|   |               |
|---|---------------|
|   | total_revenue |
| ▶ | 29500.00      |

### - Max Function

Q. Find the maximum payment made by a passenger.

Select max(amount) as highest\_payment from Payment;

|   |                 |
|---|-----------------|
|   | highest_payment |
| ▶ | 8200.00         |

### - Min Function

Q. Find the minimum payment amount received.

Select min(amount) as lowest\_payment from Payment;

|   |                |
|---|----------------|
|   | lowest_payment |
| ▶ | 4200.00        |

## 7. Group by Clause

Q. Find the total number of bookings made by each passenger.

Select passenger\_id, count(\*) as total\_bookings from Bookings Group by passenger\_id;

|   | passenger_id | total_bookings |
|---|--------------|----------------|
| ▶ | 1001         | 1              |
|   | 1002         | 1              |
|   | 1003         | 1              |
|   | 1004         | 1              |
|   | 1005         | 1              |

## 8. Having Clause

Q. Find schedules that have more than 5 bookings.

Select schedule\_id, count(\*) as total\_bookings from Bookings Group by schedule\_id Having count(\*) > 0;

|   | schedule_id | total_bookings |
|---|-------------|----------------|
| ▶ | 1           | 1              |
|   | 2           | 1              |
|   | 3           | 1              |
|   | 4           | 1              |
|   | 5           | 1              |

## 9. LIKE Operator

Q. Find passengers whose name ends with “n”.

Select passenger\_id, first\_name from Passengers where first\_name like '%n';

|   | passenger_id | first_name |
|---|--------------|------------|
| ▶ | 1002         | Priya      |
|   | 1003         | Riya       |
|   | 1005         | Maya       |
| • | NULL         | NULL       |

Q. Find passengers whose name start with “r”.

Select passenger\_id, first\_name from Passengers where first\_name like 'r%';

|   | passenger_id | first_name |
|---|--------------|------------|
| ▶ | 1001         | Rahul      |
|   | 1003         | Riya       |
|   | 1004         | Rohit      |
| • | NULL         | NULL       |

Q. Find passengers whose name contains “ra”.

Select passenger\_id, first\_name from Passengers where first\_name like '%ra%';

|   | passenger_id | first_name |
|---|--------------|------------|
| ▶ | 1001         | Rahul      |
| • | NULL         | NULL       |

## 10. UNION

Q. Display a list of passenger IDs who booked either confirmed or cancelled bookings.

Select passenger\_id from Bookings Where status = 'Confirmed' UNION select passenger\_id from Bookings where status = 'Cancelled';

| passenger_id |
|--------------|
| 1001         |
| 1002         |
| 1005         |
| 1004         |

## 11. Joins

### -Inner Join

Q. Show passenger details with their bookings.

Select p.passenger\_id, p.first\_name, p.last\_name, b.booking\_id, b.status from passengers p inner join bookings b on p.passenger\_id = b.passenger\_id;

| passenger_id | first_name | last_name | booking_id | status    |
|--------------|------------|-----------|------------|-----------|
| 1001         | Rahul      | Sharma    | 34         | Confirmed |
| 1002         | Priya      | Patel     | 35         | Confirmed |
| 1003         | Riya       | Patil     | 36         | Pending   |
| 1004         | Rohit      | Verma     | 37         | Cancelled |
| 1005         | Maya       | More      | 38         | Confirmed |

### -Left Join

Q. show all passengers and their bookings including passengers who have not booked yet.

Select p.passenger\_id, p.first\_name, b.booking\_id, b.status from passengers p left join bookings b on p.passenger\_id = b.passenger\_id;

| passenger_id | first_name | booking_id | status    |
|--------------|------------|------------|-----------|
| 1001         | Rahul      | 34         | Confirmed |
| 1002         | Priya      | 35         | Confirmed |
| 1003         | Riya       | 36         | Pending   |
| 1004         | Rohit      | 37         | Cancelled |
| 1005         | Maya       | 38         | Confirmed |

### -Right Join

Q. show all bookings with passenger details including bookings without passenger info.

Select b.booking\_id, b.status, p.first\_name, p.last\_name from passengers p right join bookings b on p.passenger\_id = b.passenger\_id;

|   | booking_id | status    | first_name | last_name |
|---|------------|-----------|------------|-----------|
| ▶ | 34         | Confirmed | Rahul      | Sharma    |
|   | 35         | Confirmed | Priya      | Patel     |
|   | 36         | Pending   | Riya       | Patil     |
|   | 37         | Cancelled | Rohit      | Verma     |
|   | 38         | Confirmed | Maya       | More      |

### -Full Join

Q. show all passengers and all bookings (matched or unmatched).

Select p.passenger\_id, p.first\_name, b.booking\_id, b.status from passengers p left join bookings b on p.passenger\_id = b.passenger\_id union select p.passenger\_id, p.first\_name, b.booking\_id, b.status from passengers p right join bookings b on p.passenger\_id = b.passenger\_id;

|   | passenger_id | first_name | booking_id | status    |
|---|--------------|------------|------------|-----------|
| ▶ | 1001         | Rahul      | 34         | Confirmed |
|   | 1002         | Priya      | 35         | Confirmed |
|   | 1003         | Riya       | 36         | Pending   |
|   | 1004         | Rohit      | 37         | Cancelled |
|   | 1005         | Maya       | 38         | Confirmed |

### -Cross Join

Q. show all possible combinations of passengers and flights.

Select p.first\_name, f.flight\_number, f.source, f.destination from passengers p cross join flights f;

|   | first_name | flight_number | source    | destination |
|---|------------|---------------|-----------|-------------|
| ▶ | Maya       | AI101         | Delhi     | Mumbai      |
|   | Rohit      | AI101         | Delhi     | Mumbai      |
|   | Riya       | AI101         | Delhi     | Mumbai      |
|   | Priya      | AI101         | Delhi     | Mumbai      |
|   | Rahul      | AI101         | Delhi     | Mumbai      |
|   | Maya       | 6E505         | Mumbai    | Bangalore   |

|   | Riya       | UK150         | Bangal... | Kolkata     |
|   | Priya      | UK150         | Bangal... | Kolkata     |
|   | Rahul      | UK150         | Bangal... | Kolkata     |

### -Self Join

Q. find pairs of flights that have the same source city but different destinations.

```
select f1.flight_number as flight1, f2.flight_number as flight2, f1.source
from flights f1 join flights f2 on f1.source = f2.source and f1.flight_id <> f2.flight_id;
```

|   | flight1 | flight2 | source |
|---|---------|---------|--------|
| ▶ | AI202   | AI101   | Delhi  |
|   | AI101   | AI202   | Delhi  |

## 12. Subqueries

### -Single row Subqueries

Q. show the passenger who made the earliest booking.

```
select passenger_id, first_name, last_name from passengers where
passenger_id in ( select passenger_id from bookings where booking_date =
(select min(booking_date) from bookings));
```

|   | passenger_id | first_name | last_name |
|---|--------------|------------|-----------|
| ▶ | 1001         | Rahul      | Sharma    |
| * | NULL         | NULL       | NULL      |

### -Multiple row Subqueries

Q. show passengers who booked flights from delhi or mumbai.

```
Select passenger_id, first_name, last_name from passengers where  
passenger_id in (select passenger_id from bookings b join schedules s on  
b.schedule_id = s.schedule_id join flights f on s.flight_id = f.flight_id where  
f.source in ('delhi', 'mumbai'));
```

|   | passenger_id | first_name | last_name |
|---|--------------|------------|-----------|
| ▶ | 1001         | Rahul      | Sharma    |
|   | 1002         | Priya      | Patel     |
|   | 1004         | Rohit      | Verma     |
| • | NULL         | NULL       | NULL      |

### - Multiple column Subqueries

Q. find flights that have the same source and destination as flight 'ai101'.

```
Select flight_number, source, destination from flights where (source,  
destination) = (select source, destination from flights where flight_number =  
'ai101');
```

|   | flight_number | source | destination |
|---|---------------|--------|-------------|
| ▶ | AI101         | Delhi  | Mumbai      |

### 13. View

Q. Create a view to show passenger booking details with flight information.

```
create view passenger_bookings as select p.passenger_id, p.first_name,  
p.last_name, f.flight_number, f.source, f.destination, b.seat_number, b.status  
from passengers p join bookings b on p.passenger_id = b.passenger_id join  
schedules s on b.schedule_id = s.schedule_id join flights f on s.flight_id =  
f.flight_id;
```

```
select * from passenger_bookings;
```

|   | passenger_id | first_name | last_name | flight_number | source    | destination | seat_number | status    |
|---|--------------|------------|-----------|---------------|-----------|-------------|-------------|-----------|
| ▶ | 1001         | Rahul      | Sharma    | AI101         | Delhi     | Mumbai      | 12A         | Confirmed |
|   | 1002         | Priya      | Patel     | 6E505         | Mumbai    | Bangalore   | 14B         | Confirmed |
|   | 1003         | Riya       | Patil     | SG220         | Pune      | Delhi       | 18C         | Pending   |
|   | 1004         | Rohit      | Verma     | AI202         | Delhi     | Chennai     | 02D         | Cancelled |
|   | 1005         | Maya       | More      | UK150         | Bangalore | Kolkata     | 22F         | Confirmed |

## 14. Windows Functions

### 1. Row Number()

Q. assign a unique rank to each booking ordered by booking\_date.

Select booking\_id, passenger\_id, booking\_date, row\_number() over (order by booking\_date) as booking\_rank from bookings;

|   | booking_id | passenger_id | booking_date        | booking_rank |
|---|------------|--------------|---------------------|--------------|
| ▶ | 34         | 1001         | 2025-09-10 10:00:00 | 1            |
|   | 35         | 1002         | 2025-09-12 12:15:00 | 2            |
|   | 36         | 1003         | 2025-09-14 09:30:00 | 3            |
|   | 37         | 1004         | 2025-09-15 16:00:00 | 4            |
|   | 38         | 1005         | 2025-09-16 08:20:00 | 5            |

### 2. Rank()

Q. Rank passengers based on their date of birth (oldest first).

select passenger\_id, first\_name, date\_of\_birth,rank() over (order by date\_of\_birth asc) as age\_rank from passengers;

|   | passenger_id | first_name | date_of_birth | age_rank |
|---|--------------|------------|---------------|----------|
| ▶ | 1004         | Rohit      | 1985-12-26    | 1        |
|   | 1005         | Maya       | 1991-08-01    | 2        |
|   | 1003         | Riya       | 1994-11-16    | 3        |
|   | 1001         | Rahul      | 1995-05-20    | 4        |
|   | 1002         | Priya      | 1998-03-12    | 5        |

### 3. dense rank()

Q. give dense rank to bookings based on booking date (earliest first).

select booking\_id, passenger\_id, booking\_date,dense\_rank() over (order by booking\_date asc) as booking\_order from bookings;

|   | booking_id | passenger_id | booking_date        | booking_order |
|---|------------|--------------|---------------------|---------------|
| ▶ | 34         | 1001         | 2025-09-10 10:00:00 | 1             |
|   | 35         | 1002         | 2025-09-12 12:15:00 | 2             |
|   | 36         | 1003         | 2025-09-14 09:30:00 | 3             |
|   | 37         | 1004         | 2025-09-15 16:00:00 | 4             |
|   | 38         | 1005         | 2025-09-16 08:20:00 | 5             |

#### 4. ntile(n)

Q. divide passengers into 4 groups based on their passenger\_id.

Select passenger\_id, first\_name, ntile(4) over (order by passenger\_id) as group\_no from passengers;

|   | passenger_id | first_name | group_no |
|---|--------------|------------|----------|
| ▶ | 1001         | Rahul      | 1        |
|   | 1002         | Priya      | 1        |
|   | 1003         | Riya       | 2        |
|   | 1004         | Rohit      | 3        |
|   | 1005         | Maya       | 4        |

#### 5. Lag()

Q. show each booking date and the previous booking date of the same passenger.

Select passenger\_id, booking\_id, booking\_date, lag(booking\_date) over (partition by passenger\_id order by booking\_date) as previous\_booking from bookings;

|   | passenger_id | booking_id | booking_date        | previous_booking |
|---|--------------|------------|---------------------|------------------|
| ▶ | 1001         | 34         | 2025-09-10 10:00:00 | NULL             |
|   | 1002         | 35         | 2025-09-12 12:15:00 | NULL             |
|   | 1003         | 36         | 2025-09-14 09:30:00 | NULL             |
|   | 1004         | 37         | 2025-09-15 16:00:00 | NULL             |
|   | 1005         | 38         | 2025-09-16 08:20:00 | NULL             |

## 6. Lead()

Q. show each booking date and the next booking date of the same passenger.

Select passenger\_id, booking\_id, booking\_date, lead(booking\_date) over (partition by passenger\_id order by booking\_date) as next\_booking from bookings;

|   | passenger_id | booking_id | booking_date        | next_booking |
|---|--------------|------------|---------------------|--------------|
| ▶ | 1001         | 34         | 2025-09-10 10:00:00 | NULL         |
|   | 1002         | 35         | 2025-09-12 12:15:00 | NULL         |
|   | 1003         | 36         | 2025-09-14 09:30:00 | NULL         |
|   | 1004         | 37         | 2025-09-15 16:00:00 | NULL         |
|   | 1005         | 38         | 2025-09-16 08:20:00 | NULL         |

## 7. first\_value()

Q. find the first flight scheduled for each airline.

Select airline, flight\_number, departure\_time, first\_value(flight\_number) over (partition by airline order by departure\_time) as first\_flight from flights;

|   | airline   | flight_number | departure_time      | first_flight |
|---|-----------|---------------|---------------------|--------------|
| ▶ | Air India | AI101         | 2025-09-25 08:00:00 | AI101        |
|   | Air India | AI202         | 2025-09-28 14:00:00 | AI101        |
|   | IndiGo    | 6E505         | 2025-09-26 15:00:00 | 6E505        |
|   | SpiceJet  | SG220         | 2025-09-27 07:30:00 | SG220        |
|   | Vistara   | UK150         | 2025-09-29 11:00:00 | UK150        |

## 8. Last value()

Q. find the last flight scheduled for each airline.

Select airline, flight\_number, departure\_time, last\_value(flight\_number) over (partition by airline order by departure\_time rows between unbounded preceding and unbounded following) as last\_flight from flights;

|   | airline   | flight_number | departure_time      | last_flight |
|---|-----------|---------------|---------------------|-------------|
| ▶ | Air India | AI101         | 2025-09-25 08:00:00 | AI202       |
|   | Air India | AI202         | 2025-09-28 14:00:00 | AI202       |
|   | IndiGo    | 6E505         | 2025-09-26 15:00:00 | 6E505       |
|   | SpiceJet  | SG220         | 2025-09-27 07:30:00 | SG220       |
|   | Vistara   | UK150         | 2025-09-29 11:00:00 | UK150       |

## 9. Percent rank()

Q. calculate percent rank of passengers based on passenger\_id.

`select` passenger\_id, first\_name, percent\_rank() `over (order by` passenger\_id) `as` perc\_rank `from` passengers;

|   | passenger_id | first_name | perc_rank |
|---|--------------|------------|-----------|
| ▶ | 1001         | Rahul      | 0         |
|   | 1002         | Priya      | 0.25      |
|   | 1003         | Riya       | 0.5       |
|   | 1004         | Rohit      | 0.75      |
|   | 1005         | Maya       | 1         |
